

CORRGAZETTE

CORREACTOLOGY® HEALTH CARE HISTORY

Like all new ideas, Correactology® Health Care was born from boundary-free thinking and endless hours of study. In 1996, Michael Lapointe realized that achieving a mastery of a dichotomous leg test would allow a health care provider to collect body data in a very unique way. A few years later, with an idea for optimizing health, he was joined by his family who believed that there was value in developing and honing this unique and possibly unhinged idea.

On March 4, 1998, with working hypothesis in hand, the newly formed Lapointe Group opened its first Health Care Center on William Street in Sturgeon Falls. The practice was not only well received by the local community, but quickly experienced patient influx from all over Ontario and even from outside of the province. In the fall of the year 2000, Allan Lapointe began developing the hypothesis that the body corrected in a specific pathway and dividing the body into eight zones and four levels helped to attain a greater understanding of body health.

The study resulted in establishing condition specific *Proprietary Correactology® Corrective Patterns* to redirect entropy (degree of disorder in the system), ultimately allowing the body to recover health. Consequently, Correactology® Health Care had known great findings to the point that it became a teachable program. Beyond gaining in popularity and distinctiveness, Correactology® Health Care was generating better than expected results with many cases. From these innovative ideas, study and the belief that bodies have an incredible potential for recovery, Correactology® Health Care has proven very effective.

FEBRUARY 22 IS PINK SHIRT DAY!

You may notice that your children’s school or local businesses are promoting wearing pink on Wednesday, February 22. This is a national initiative designed to promote programs supporting children’s healthy self-esteem in attempts to end bullying. Bullying is experienced by nearly one in five children who are currently attending school. Although it has existed for a very long time bullying is evolving and is no longer exclusive to within the classroom. Bullying can lead to physical injury, social problems, self-esteem issues, as well as mental health issues, all of which may continue into adulthood. This year, the organizers of the campaign want to remind everyone that “no matter what our differences, being nice is always a choice worth making.” For information and events in your area please visit pinkshirtday.ca.

100 YEARS OF HOCKEY

Arguably one of the most Canadian past times, the National Hockey League (NHL) is celebrating its 100th year of existence. Originally comprised of Canadian and Northern United States teams, the NHL has expanded rapidly over the last 100 years. Players and fans now span the globe with many of the players becoming household names. Celebrations began January 1st and extend to December 19th. For more information on the ongoing centennial events please go to the news section at www.nhl.com.

Here are some of the health benefits from learning to skate and playing hockey:

- Hockey and skating, like most physical activity, can help improve your mood, stress levels, and mental health due to the release of endorphins. This is especially seen in the winter due to a general lack of vitamin D and physical activity.
- Learning to skate at any age vastly improves body coordination and balance.
- Contrary to popular belief, playing hockey is actually a full-body workout. You use many muscles in your upper body as much as in your legs.
- There are many local outdoor rinks and skating paths that are free to use. Get out for some fresh air!

PATIENT TESTIMONIAL

I suffered with chronic pain and daily headaches for over a year post accident. I tried almost every alternative under the sun with little relief. I was on heavy painkillers daily and sleeping medication but I found I was starting to feel depressed and hopeless. A family member told me about Correactology® and the amazing results they received in so little time. I can say that after only three treatments I have had more pain relief than I have had combined over the last year of doing all of my other treatments. Correactology® is no joke! I will be recommending it to everyone that I know. The only thing I wish I did different was going to see Michael Lapointe sooner. If you are suffering Correactology® is 100% the way to go!

- *Written by a Correactology® Patient*
